

## REDWOOD GLOBAL CAPITAL

# Platform I — AI & Deeptech

A public summary of Redwood's ownership-led approach to encrypted compute, applied AI and critical-technology companies in Southeast Asia.

Status	Public description
Strategy	Focused portfolio; dedicated ownership structures
ZipLogic	Operating development platform; nine granted patents
CID	Commercial activity; supporting evidence under NDA
Aura	Application-led validation stage
Capital pathways	Strategic and public-market options evaluated; no assurance or timetable

## Investment posture

Platform I combines ownership rights with operating support across distribution, data intelligence, portfolio integration and shared services.

## Underwriting focus

Technical feasibility, defensibility, customer need, regulatory context, capital intensity, governance rights and downside cases.

## Value creation

Operating plans are company-specific. Redwood does not present prior individual experience as Redwood fund performance.

## Key public risk factors

- Technology may not achieve expected performance or adoption.
- Customer concentration, regulation and long commercial cycles may affect outcomes.
- Capital-market pathways depend on market conditions, approvals and readiness.
